p. 374-377. (Abstract available)

DESCRIPTORS: *Loading (Mechanics), Steel, Lead
alloys, Aluminum alloys, Statistical analysis, *Fatigue
(Mechanics), Tests.

It is proposed instead of plotting the time or the applied
load variation numbers in Wöhler diagrams to introduce
the reciprocal values, i.e. the speed of destruction. By
doing this the limiting case of infinitely long lifetime
can be depicted projectively as the vanishing point of
the time axis in the finite plane and the desired critical
load is found as a clear intercept of a straight line with

DESCRIPTORS: *Scheduling, Theory.

The axiom system of plane projective geometry is dual
in the sense that it is transformed into itself by exchange
of the notions "point" and "line". It follows that for
every theorem the dual sentence is also a theorem.
However, from the duality of the axiom system one
cannot conclude that in a model the truth of a sentence
implies that of the dual sentence; even less can one
conclude that each model admits a 1-1 transformation

DETERMINATION OF TRACES OF LEAD IN CON-
CENTRATED PHOSPHORIC ACID BY ANODIC
AMALGAM VOLTAMMETRY. [1963] 6p (refs. omitted).
Order from SLA \$1.10 63-18151

Trans. of Zeitschrift für Analytische Chem[ie]
(West Germany) 1962, v. 186 [no. 1] p. 123-127.

DESCRIPTORS: *Lead, Microanalysis, *Phosphoric
acid, Anodes, Mercury alloys, Voltmeters, Pyridine.

By means of anodic amalgam voltammetry it is possible
to determine very small traces of lead and other heavy
metals in concentrated phosphoric acid, (sp. gr. 1.7).
The only reagent added is pyridine. Thus the danger of
introducing impurities is very small in contrast to ex-
isting methods. The time required for a single deter-
mination is 15 min. The variance for 1 ppm. lead from
11 determinations was 3.8%. (Author)
